

CLOSE-OUT FACT SHEET

Project Name: Solid Waste Transfer Station, Starr County, Texas.
Project Location: Starr County, Texas
Project Sector: Solid Waste

Certification: Jul-12
Construction complete: Sep-10
Close-out Report: May-15

The Pre-Project Conditions

Starr County's Municipal Solid Waste Landfill (MSWL) would reach its design capacity in the near future; additionally, due to the multiple permits and processes, including capital to finance and operate it, the construction of a new landfill is not in the near term. Furthermore, nearby existing facilities, particularly in the City of Edinburg, contain adequate capacity to handle the county's needs, thus resulting in the decision to construct a transfer station.

The Project Objective

To provide adequate solid waste disposal services to the residents of Starr County by constructing a Transfer Station to facilitate transportation of solid waste to the regional landfill and thus minimize the potential for illegal dumping and associated environmental and health risks.

The Project Scope

The project consisted of the construction of a transfer station facility with the capacity to properly manage the transfer and disposal of up to 300 tons of solid waste per day in compliance with federal and state laws for the next 20 years after project implementation.

Actual Investment: US\$(Millions)	1.43M
NADB Grant: SWEP	0.45M
Other sources:	0.98M

Anticipated Investment: US\$	At Certification	Variation
NADB Grant: SWEP	0.45M	0.0M
Other sources:	0.98M	0.0M
Total	1.43M	0.0M
Other sources: Sponsor loan		

Benefited population:	60,968
------------------------------	---------------

The Results

Outcomes	Indicators	Target	Actual
Improve solid waste disposal management	Solid waste facility capacity	300 tons/day	300 tons/day
Strengthen Institutional Capacity	Compliance with applicable laws and regulations	100%	100%

Outputs	
Construction of a Transfer Station .	Capacity to manage up to 300 tons/day

Significant project contributions
Minimizing the potential for illegal dumping and associated environment and health risks.
